S945CM2T

CURLING LINING MACHINE + STACKER

Automatic double station curling lining machine equipped with two separated heads for the curling and lining operations on the bottoms and the covers. The machine consists of a welded steel frame, on which are installed two workings heads:

- the first one makes the curling, by double rollers
- the second one applies the compound (if required), by spraying nozzle

MACHINE FACILITATION

- Easy access to the operating head
- No machine cleaning is required in case of production stoppages
- Reduced and simplified machine maintenance
- No need for compound pre-heating
- Reduced overall dimensions being the two working heads located on a single machine frame

A motorized entry conveyor belt keeps a constant bottoms feeding flow. The working sequence is guaranteed by a pneumatic control system assisted by a bottom detecting device. The machine can be provided with an end-stacker or a pusher into the compound drying oven.
